PROFESSIONAL SUMMARY

Computer Science Engineering fresher (graduated May 2026) with hands-on experience in full-stack web development using Python programming and Generative AI. Skilled in prompt engineering and problem solving. Built real-world projects including an AI-powered chatbot. Seeking a Software Developer or Prompt Engineer role where I can contribute to scalable, production-ready applications.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML5, CSS3, SQL

AI & Machine Learning: Generative AI, Prompt Engineering,

Developer Tools: Git, GitHub, VS Code, Antigravity

Soft Skills: Team Collaboration, Problem-Solving, Leadership, Analytical Thinking, Presentation Skills.

EXPERIENCE

Prompt Engineer Intern — Super Teacher Edu Reforms, Hyderabad, India

Jun 2026 – Aug 2026

- Designed and deployed a LMS portal that helps the teachers to conduct assessments and helps the students to understand the courses and attend the assessments.
- Implemented scripted content scheduling logic that improved system automation and allowed unattended 24/7 ad rotation across deployed devices.

PROJECTS

Digital Certificate Management System [GitHub](#)

Tech Stack: React.js, Node.js, MongoDB, Blockchain, QR Code API

- Led a team to architect and develop a blockchain-based certificate management system, ensuring tamper-proof issuance and storage of digital credentials.
- Implemented QR code-based certificate verification to enable instant authenticity checks and prevent certificate fraud.
- Designed the end-to-end workflow from certificate generation to verification, integrating blockchain immutability with a user-friendly interface.

AI Career Guidance Chatbot — Google Hackathon [GitHub](#)

Tech Stack: Python, LLM APIs (Gemini/OpenAI), Prompt Engineering, REST APIs

- Built an AI-powered career advisory chatbot that delivers personalized skill recommendations and career roadmaps based on user input.
- Leveraged large language model (LLM) APIs and prompt engineering techniques to generate context-aware, actionable career guidance.
- Developed and submitted as part of a Google Hackathon, demonstrating ability to deliver an end-to-end AI product under time constraints.

Online Voting System [GitHub](#)

Tech Stack: HTML5, CSS3, JavaScript, React, Flask, MongoDB

- Designed and developed a comprehensive web-based election system using React, Flask, MongoDB, and scikit-learn, featuring MFA with email OTP, bcrypt password hashing, photo-based identity verification, secure vote casting with transaction IDs, JWT-secured role-based access (Voter/Admin) via React Router v6, an admin dashboard with fraud analytics, and public pages for mission, security, privacy, FAQ, support, and accessibility.
- Implemented AI-powered fraud detection using a local Random Forest model (scikit-learn) analysing 3000+ voter behavioural features (login patterns, session data, device info) to flag suspicious activity in real time with Low/Medium/High risk categorization, supported by a complete audit trail and Docker - ready deployment.

EDUCATION

B. Tech in Computer Science & Engineering

May 2026

Holy Mary Institute of Technology and Science, Telangana | GPA: 7.0

Intermediate (MPC)

May 2022

Narayana Junior College, Telangana | GPA: 6.9

High School (SSC)

March 2020

New Little Lilly High School, Telangana | GPA: 9.2

ACTIVITIES & INTERESTS

- Active participant in hackathons and coding competitions, including a Google-hosted hackathon where I built and submitted a functional AI product.
- Interested in Gen AI, Web3, and open-source software development.
- Personal interests include music production and engaging with the local tech community.
